

## How to use this course

This course covers selected key areas of Digital Image Processing. Individual areas are divided into topics. Each topic is designed as a separate article that has its own references. The text is accompanied by a number examples and their source codes for the MATLAB environment, which the reader can try and experiment with. A PDF version is also available for each topic (the download link is at the bottom of each page) so that the reader can study the topic offline, e.g. on a reader or another device.
